FACILITYPRO ACADEMY

VERSION CONTROL PROTOCOL

Document Control, Change Management, and Field Material Standards

Version 4.0 | Confidential — Internal Use Only

PLATFORM STANDARD

ConnectTeams is the current operating platform for all document storage, distribution records, and change logging. All references to system logging within this protocol must be completed using ConnectTeams until further notice. This protocol will be updated upon the launch of Eagle IO.

1. Purpose and Scope

This protocol governs how all FacilityPro Academy training documents are created, changed, distributed, recalled, and archived. It exists to ensure that every crew member, trainer, and supervisor is working from the same version of every document at all times.

PRINCIPLE

If a document is not from the controlled source, it is an uncontrolled copy. Uncontrolled copies are not authorised for training delivery, field use, or operational reference. Any document found in the field that does not match the current approved version must be removed immediately and replaced.

What This Protocol Controls

- All training manuals, modules, and programme documents
- All field execution sheets and operational SOPs
- All SOP infographics (visual reference sheets)
- All field tools (pocket reference cards, dwell time cards, reinforcement card templates)
- All assessment materials, knowledge check blueprints, and scoring rubrics
- All trainer certification records and observation checklists

What This Protocol Does Not Control

- Client-specific job sheets and site instructions (these are managed through ConnectTeams)
- Individual trainee records and programme completion records (these are operational records, not controlled documents)
- ConnectTeams or future platform configuration (this is managed by the IT function)

2. Controlled Documents Register

The following documents are controlled under this protocol. Each document has a unique reference, a current version, and a designated owner responsible for its accuracy.

Ref	Document Title	Type	Current Version	Owner
FPA-TM-001	Intermediate Operations Training Manual	Core Manual	v4.0	Training Supervisor
FPA-TT-001	Train the Trainer Module	Trainer Module	v4.0	Training Supervisor
FPA-FE-001	DVG Cleaning SOP — Field Execution Sheet	Field Sheet	v4.0	Operations Manager
FPA-SI-001	Kitchen SOP Infographic	Visual SOP	v4.0	Training Supervisor
FPA-SI-002	Washroom SOP Infographic	Visual SOP	v4.0	Training Supervisor
FPA-SI-003	Glass SOP Infographic	Visual SOP	v4.0	Training Supervisor
FPA-SI-004	Dry General Cleaning SOP Infographic	Visual SOP	v4.0	Training Supervisor
FPA-SI-005	Mopping SOP Infographic	Visual SOP	v4.0	Training Supervisor
FPA-FT-001	Pocket Reference Card	Field Tool	v4.0	Training Supervisor
FPA-FT-002	Dwell Time Reference Card	Field Tool	v4.0	Training Supervisor
FPA-FT-003	Reinforcement Card Template	Field Tool	v4.0	Training Supervisor

Single Source of Truth

CONTROLLED SOURCE

The current approved version of every controlled document is stored in the FacilityPro Academy Controlled Document Library in ConnectTeams. This is the single source of truth. All printed copies, laminated cards, and distributed materials must be produced from this controlled source. If a document is not from the Controlled Document Library, it is uncontrolled and must not be used.

- The Controlled Document Library is maintained by the Training Supervisor
- Access is read-only for all users except the Training Supervisor and Operations Manager
- Every document in the library carries its version number, effective date, and document reference on the first page or footer
- A printed copy that does not show the current version number is assumed to be obsolete and must be replaced

3. Roles and Responsibilities

Role	Responsibilities
Operations Manager	Approves all changes to controlled documents. Authorises emergency changes. Owns the Field Execution Sheet. Schedules document review cycles. Has final authority on all version control decisions.
Training Supervisor	Proposes changes. Implements approved changes. Maintains the Controlled Document Library. Distributes updated materials. Manages recall of obsolete materials. Conducts impact assessments on linked documents.
Certified Trainer	Reports errors, inconsistencies, or improvement opportunities to the Training Supervisor. Confirms receipt of updated materials. Removes obsolete materials from training rooms.
Crew Lead	Confirms receipt of updated field tools. Removes obsolete materials from kit bags. Reports any uncontrolled copies found in the field to the Training Supervisor.
All Crew Members	Use only current approved versions of all documents. Report any document they believe may be outdated to their Crew Lead or supervisor.

4. Version Numbering Rules

All controlled documents use a two-part version number: Major.Minor (e.g. v4.0, v4.1, v4.2, v5.0).

Change Type	Version Impact	Examples
Major change — structural, procedural, or systemic	Increment major number, reset minor to 0 (e.g. v4.0 → v5.0)	New training phase added; SOP sequence changed; execution stage added or removed; platform migration (ConnectTeams to Eagle IO)
Minor change — wording, clarification, correction	Increment minor number (e.g. v4.0 → v4.1)	Typo correction; wording clarification; dwell time adjusted; additional verification item added; field tool layout improved
No change — review completed, no updates required	Version number unchanged, review date recorded	Scheduled review completed with no findings; document confirmed as current

NUMBERING RULE

Every approved change — no matter how small — results in a new version number. There are no unnumbered changes. If the document was changed, the version number must change. This is how the field confirms they have the current version.

5. Standard Change Process

All changes to controlled documents follow this 7-step process. No step may be skipped.

Step 1: Change Request

- Any person may propose a change by submitting a Change Request to the Training Supervisor
- The request must state: which document, what change is proposed, and why
- The Training Supervisor logs the request in the Change Log (Section 10)

Step 2: Impact Assessment

- The Training Supervisor reviews the proposed change and identifies all linked documents that may be affected
- **Cross-document impact rule:** when any document in a linked set changes, all linked documents must be reviewed for consistency. For example, a change to the Washroom SOP Infographic triggers a review of: the Training Manual, the Field Execution Sheet, the Pocket Reference Card, the Dwell Time Card, and the Train the Trainer Module.
- The impact assessment is recorded in the Change Log

Step 3: Approval

- The Training Supervisor presents the proposed change and impact assessment to the Operations Manager
- The Operations Manager approves, rejects, or requests modification
- Approval must include: the effective date, whether the change is immediate or has a transition window, and the exact date old versions become invalid

EFFECTIVE DATE RULE

Every approved change must state three things: (1) the effective date — when the new version takes effect, (2) the transition window — whether the change is immediate or allows a short period for distribution, and (3) the expiry date — the exact date old versions become invalid and must be removed from all field use. The transition window must not exceed 14 calendar days for standard changes.

Step 4: Implementation

- The Training Supervisor updates the controlled document in the Controlled Document Library
- The version number, effective date, and change summary are updated on the document
- All linked documents identified in the impact assessment are also updated if required
- The previous version is moved to the Archive folder and marked SUPERSEDED (see Section 8)

Step 5: Distribution

- The Training Supervisor distributes the updated document to all affected parties

- For digital documents: upload to the Controlled Document Library and notify all trainers and supervisors via ConnectTeams
- For printed/laminated materials: produce new copies from the controlled source and issue to all kit bags, training rooms, and site locations
- A Distribution Record is completed listing every recipient, the date of issue, and confirmation of receipt

Step 6: Recall of Obsolete Materials

- All copies of the previous version must be recalled and handled per the Obsolete Document Control rules (Section 8)
- The Training Supervisor confirms recall is complete before the expiry date

Step 7: Change Log Completion

- The Training Supervisor completes the Change Log entry with: the final version number, effective date, distribution confirmation, and recall confirmation
- The Operations Manager signs off the completed change

6. Emergency Change Process

An emergency change is any change that cannot wait for the standard change process due to an immediate risk to health, safety, compliance, or operational integrity.

Emergency Change Triggers

Category	Examples
Health and Safety	Incorrect chemical handling instruction; missing safety warning; PPE requirement change
Chemical Handling	Product reformulation affecting dwell times; new chemical introduced; product recall
Site Security	Access procedure change; key safe code compromise; emergency protocol update
Legal / Compliance	Regulatory change affecting cleaning procedures; insurance requirement; employment law update

Emergency Change Process

- **Step 1:** The person identifying the risk contacts the Operations Manager immediately — do not wait for the Training Supervisor
- **Step 2:** The Operations Manager assesses the risk and authorises the emergency change verbally. Verbal authorisation is valid for emergency changes only.
- **Step 3:** The Training Supervisor implements the change immediately in the controlled document
- **Step 4:** The change is communicated to all trainers, supervisors, and affected crew members within 24 hours via ConnectTeams and direct verbal briefing
- **Step 5:** The effective date for an emergency change is always immediate — there is no transition window
- **Step 6:** Within 7 calendar days of the emergency change, the full standard change process (Steps 1–7) must be completed retrospectively to formalise the change, update the Change Log, and confirm distribution and recall

EMERGENCY RULE

An emergency change takes effect immediately upon verbal authorisation by the Operations Manager. All affected crew members must be briefed within 24 hours. The old version is invalid from the moment of authorisation — not from the date of formal documentation. Safety cannot wait for paperwork.

7. Distribution, Recall, and Reissue of Field Materials

Field materials include all printed, laminated, or physically distributed documents: Pocket Reference Cards, Dwell Time Cards, SOP Infographics, Field Execution Sheets, and Reinforcement Card Templates.

Distribution Standards

- All field materials must be produced from the current approved version in the Controlled Document Library
- Every printed or laminated copy must show the version number and effective date
- The Training Supervisor maintains a Distribution Register recording: which materials were issued, to whom, on what date, and in what quantity
- Recipients must confirm receipt — verbal confirmation is not sufficient. Use the ConnectTeams acknowledgement function or a signed receipt

Mandatory Replacement

When a new version of a field material is issued, the following replacement process applies:

Location	Action	Responsible
Training rooms	Remove old version. Display new version. Confirm replacement.	Certified Trainer
Crew kit bags	Remove old card/sheet. Insert new version. Confirm with each crew member.	Crew Lead
Site notice boards	Remove old poster. Display new version. Photograph as confirmation.	Crew Lead
Digital library	Replace file. Move old version to Archive. Mark as SUPERSEDED.	Training Supervisor
Personal copies	Crew members must return old copies and receive new ones.	Crew Lead

REPLACEMENT RULE

A new version is not ‘in effect’ until the old version has been physically removed from every location where it was distributed. Distribution of the new version and recall of the old version must happen simultaneously — not sequentially. No crew member should have a period where they have neither version.

8. Obsolete Document Control and Archive Rules

When a document is superseded by a new version, the old version becomes obsolete. Obsolete documents must be handled consistently to prevent accidental field use.

Obsolete Document Handling

Material Type	Handling Rule
Printed training manuals and modules	Collect and destroy. Do not retain in training rooms. Archive one reference copy marked SUPERSEDED in the controlled archive.
Laminated field tools (pocket cards, dwell time cards)	Collect from all kit bags and training rooms. Destroy. Issue replacement from new version.
SOP infographic posters	Remove from all display locations. Destroy. Replace with new version.
Digital files	Move to Archive folder in ConnectTeams. Rename file to include SUPERSEDED and the date (e.g. ‘Training_Manual_v3.0_SUPERSEDED_2026-04-19.docx’). Set to read-only.
Email attachments or shared copies	Notify all recipients that the attached version is now obsolete. Provide a link to the current version in the Controlled Document Library.

Archive Rules

- One digital archive copy of every superseded version is retained in the Archive folder in ConnectTeams
- Archive copies are clearly marked SUPERSEDED with the date they were replaced
- Archive copies are read-only — they cannot be edited, printed, or distributed
- Archive copies are retained for reference, audit, and compliance purposes only — never for field use
- The archive is reviewed annually by the Operations Manager. Versions older than 3 years may be permanently deleted at the Operations Manager’s discretion

ARCHIVE RULE

A superseded document in the archive is not a backup. It is a historical record. If a current document is lost or corrupted, the replacement must be produced from the controlled source — never by reactivating an archived version. Archived versions may contain outdated procedures that could cause harm if reintroduced.

9. Review Cycle and Audit Requirements

Even when no changes are requested, all controlled documents must be reviewed on a scheduled cycle to confirm they remain accurate, current, and aligned with operational practice.

Scheduled Review Cycle

Document Type	Review Frequency	Review Owner	Next Review Due
Core Training Manual (FPA-TM-001)	Every 12 months	Training Supervisor	
Train the Trainer Module (FPA-TT-001)	Every 12 months	Training Supervisor	
Field Execution Sheet (FPA-FE-001)	Every 6 months	Operations Manager	
SOP Infographics (FPA-SI-001 to 005)	Every 12 months	Training Supervisor	
Field Tools (FPA-FT-001 to 003)	Every 12 months	Training Supervisor	
This Version Control Protocol	Every 12 months	Operations Manager	

Review Process

- The review owner reads the document in full and compares it against current operational practice
- The review owner checks all linked documents for consistency
- If changes are needed: the review owner submits a Change Request and follows the standard change process
- **If no changes are needed:** the review owner records ‘Reviewed — no changes required’ in the Change Log with the review date and their name. The version number does not change, but the review is documented. A ‘no change’ review is a controlled decision, not an oversight.

Audit Requirements

- The Operations Manager may conduct an unannounced audit of any training room, kit bag, or site location to verify that only current approved versions are in use
- Any obsolete, uncontrolled, or unapproved document found during an audit must be removed immediately and reported
- Audit findings are recorded in ConnectTeams and reviewed at the next scheduled management review

10. Change Log

The Change Log records every change to every controlled document. It is maintained by the Training Supervisor and reviewed by the Operations Manager.

Field	Entry
Change Log Entry Number	
Date of Request	
Requested By	
Document Reference	
Document Title	
Current Version	
Proposed Change	
Reason for Change	
Impact Assessment — linked documents affected	
Approved / Rejected / Modified	
Approved By	
Approval Date	
Effective Date	
Transition Window (if applicable)	
Old Version Expiry Date	
New Version Number	
Emergency Change? (Yes / No)	
Distribution Confirmed (Date)	
Recall Confirmed (Date)	
Change Log Completed By	
Operations Manager Sign-Off	

(Duplicate this template for each change. Maintain a running log in ConnectTeams.)

11. Version Control Register

This register provides a summary view of the current version status of every controlled document. It is updated by the Training Supervisor after every approved change.

Ref	Document	Version	Effective Date	Last Reviewed	Next Review Due	Status
FPA-TM-001	Training Manual	v4.0				Current
FPA-TT-001	Train the Trainer Module	v4.0				Current
FPA-FE-001	Field Execution Sheet	v4.0				Current
FPA-SI-001	Kitchen SOP Infographic	v4.0				Current
FPA-SI-002	Washroom SOP Infographic	v4.0				Current
FPA-SI-003	Glass SOP Infographic	v4.0				Current
FPA-SI-004	Dry General Cleaning SOP Infographic	v4.0				Current
FPA-SI-005	Mopping SOP Infographic	v4.0				Current
FPA-FT-001	Pocket Reference Card	v4.0				Current
FPA-FT-002	Dwell Time Reference Card	v4.0				Current
FPA-FT-003	Reinforcement Card Template	v4.0				Current
